

QC Estimator — Test Program Setup

Build this one program from the Meridian RFP to exercise every launched feature.

How to use this: The RFP is your client input. This guide turns it into estimator entries. The costs below are **vendor / base costs you enter** — the engine applies markups, tax, fees, and commissions on top. The point is to watch those interactions work, so the numbers are chosen to hit edge cases, not to be “right.”

Step 1 — Create the lead, run it through the pipeline

In the Kanban pipeline, add a new lead from the RFP:

- **Client / company:** Meridian Wealth Partners
- **Contact:** Danielle Reyes, CMP
- **Event:** 2026 President’s Club Incentive Retreat
- **Location:** Charleston, SC *(drives the county-level tax — see Step 4)*
- **Dates:** Oct 14–16, 2026
- **Guests:** 120
- **Budget target:** \$850 per person

Verify as you go: drag the card across lanes; confirm the Completed and Did Not Book lanes stay collapsed; then convert the lead to a program and confirm the copper banner links lead ↔ program (and that you can’t create a second program from the same lead).

Step 2 — Build the estimates

Create the estimates below under the program. Together they cover all four section types, the AV and Décor estimate types, duration-priced bar, restaurant fees, and scenario comparison.

Estimate 1 — Welcome Reception

Standard estimate, 120 guests.

Section	Line item	Qty	Unit cost	Markup category
F&B	Passed hors d’oeuvres	120	\$24.00	F&B
F&B	Chef-attended stations	120	\$20.00	F&B
Equipment & Staffing	Market / string lighting	1	\$850.00	Décor
Equipment & Staffing	Cocktail tables + linens	15	\$32.00	Rentals
Non-Taxable Staffing	Bartenders (2 hr)	4	\$180.00	Staffing
Non-Taxable Staffing	Event captain	1	\$600.00	Staffing

+ Bar package: add a Premium Open Bar package — 120 guests, **2 hours**. Note the duration; you’ll compare it against the 4-hour gala bar to confirm duration pricing.

Estimate 2 — Awards Gala, Venue A (Hotel Ballroom)

Standard estimate, 120 guests. This is one half of the scenario comparison.

Section	Line item	Qty	Unit cost	Markup category
F&B	Plated 3-course dinner	120	\$88.00	F&B
Venue Fees	Ballroom rental	1	\$4,500.00	Venue Fee

Section	Line item	Qty	Unit cost	Markup category
Equipment & Staffing	Servers (gala)	12	\$210.00	Staffing
Non-Taxable Staffing	Event captain	1	\$750.00	Staffing

+ Bar package: Premium Open Bar — 120 guests, **4 hours** (should price higher than the 2-hour reception bar).

Estimate 2b — Gala Décor

Décor estimate type — tests the Décor estimate.

Section	Line item	Qty	Unit cost	Markup category
Décor	Elevated centerpieces	15	\$150.00	Décor
Décor	Uplighting package	1	\$1,200.00	Décor
Décor	Branded stage backdrop	1	\$2,600.00	Décor

Estimate 2c — General Session AV

AV estimate type — tests the AV estimate. Override the markup on the projection line (see Step 3).

Section	Line item	Qty	Unit cost	Markup category
AV	Projection + dual screens	1	\$3,200.00	AV
AV	Audio + wireless mics	1	\$1,600.00	AV
AV	Staging / riser	1	\$1,900.00	AV

Estimate 3 — Awards Gala, Venue B (Historic Restaurant Buyout)

Standard estimate, 120 guests. The other half of the comparison — and it tests restaurant fee layering + the F&B minimum break-even.

Section	Line item	Qty	Unit cost	Markup category
F&B	Plated dinner (restaurant)	120	\$105.00	F&B (restaurant)
F&B	Restaurant buyout minimum	1	\$15,000.00	F&B minimum
Non-Taxable Staffing	Event captain	1	\$750.00	Staffing

Two things to watch here: (1) attach this estimate to a **restaurant** vendor so the restaurant service-fee layering kicks in; (2) the \$15,000 buyout minimum should trigger the F&B-minimum break-even logic. Add a **house open bar, 4 hours**. Then compare per-person against Venue A.

Estimate 4 — Excursions & Transportation

Standard estimate. ~80 of 120 opt in — lower per-person, so its budget badge should read UNDER target (vs. the gala's OVER).

Section	Line item	Qty	Unit cost	Markup category
Tour	Harbor sightseeing cruise	80	\$52.00	Tours / Activities
Tour	Culinary walking tour	40	\$68.00	Tours / Activities
Transportation	Motorcoach (per coach)	3	\$1,350.00	Transportation
Non-Taxable Staffing	Tour guides	2	\$300.00	Staffing

Step 3 — Turn on the engine's edge cases

These settings exercise the parts of the pricing engine that simple line items won't reach:

- **Commissions (stacked):** on the program / estimate, toggle on CC processing, client commission, and the GDP toggle; add a third-party commission on at least one estimate. Confirm they stack and the margin reflects all of them.
- **Per-line-item markup override:** on Estimate 2c, override the markup on the "Projection + dual screens" line. Confirm only that line and the total change.
- **Menu + dietary tags:** attach a vendor menu to the Venue B restaurant with the RFP's 3 courses and dietary tags (VEG / VGN / GF / nut), then use the new

"Vendor menus" panel on the estimate to import it — confirm it displays by course, shows the dietary tags, and that importing updates the estimate total.

Step 4 — Feature checklist (verify each)

As you build, tick these off. This is the full set of recently launched features, mapped to this one program.

- ☐ **Pipeline:** lead created, dragged across lanes; Completed / Did Not Book lanes collapsed by default.
- ☐ **Lead → program:** copper banner links both ways; one-program-per-lead enforced.
- ☐ **All four section types** (F&B, Equipment & Staffing, Venue Fees, Non-Taxable Staffing) render and total correctly.
- ☐ **AV and Décor estimate types** build correctly (Estimates 2b / 2c).
- ☐ **Vendor menu panel:** shows courses + dietary tags; Import adds items AND the total updates.
- ☐ **Bar packages:** 2-hour reception bar prices lower than the 4-hour gala bar (duration pricing).
- ☐ **Restaurant fee layering** applies on Venue B.
- ☐ **F&B minimum break-even** shows on Venue B's \$15,000 buyout minimum.
- ☐ **County tax:** Charleston, SC computes correctly (three-rate system).
- ☐ **Commissions stack** (CC + client + GDP + third-party); margin reflects them.
- ☐ **Per-line-item markup override** changes only that line + the total.
- ☐ **Per-person budget badge:** reads OVER on the gala, UNDER on excursions, vs the \$850 target (the badge you fixed).
- ☐ **Margin health** displays (STRONG / etc.); internal margin (True Net, OpEx) visible internally only.
- ☐ **Scenario comparison:** Venue A vs Venue B per-person compares cleanly.
- ☐ **Export:** clipboard pipe-table + Excel (Client Summary + Detail sheets).

Step 5 — Generate the deck (the finale)

With all estimates built, generate the proposal deck. This is the multi-estimate PDF, and it's also where you'll confirm the polish-branch fixes:

- ☐ **Multi-estimate deck** renders all estimates with consistent brand styling.
- ☐ **Logo** renders clean on the cover (no box / halo).
- ☐ **Fonts** are Cormorant Garamond + Jost, not fallback.
- ☐ **Internal margin data (True Net / OpEx / commissions) does NOT appear** anywhere in the client PDF.

Watch for the known content bugs: name an estimate “Awards Gala - DR” or “- DONE” and confirm the deck no longer prints the internal suffix on the client cover; and confirm the venue subtitle matches the title (the Fado / Wicked Wolf mismatch). This program is also your regression check for those fixes.
